

PACIFIC DEVELOPMENT CYCLES

As part of the ongoing effort to make Pacific the best possible platform for Colorado EGEs, the Statewide Internet Portal Authority (SIPA) and Colorado Interactive (CI) formed a Steering Committee that meets on the third Thursday of each month to discuss potential enhancements to be released as one of two concurrent development cycles. You can track the progress of requested features by checking the Steering Committee's meeting notes at www.colorado.gov/goingpacific/pacific-feature-steering-committee.

MONTHLY BUG FIXES AND SECURITY PATCHES

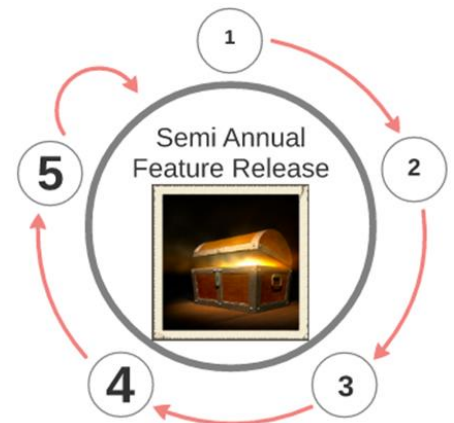

Pacific users can expect an update every month that will correct bugs and ensure the platform remains secure. Please have your EPM report any bugs you discover.

SEMI-ANNUAL FEATURE RELEASE

Enhancements to the Pacific platform will be released every March and September. The other five months of the development cycle are dedicated to researching, implementing, and testing the features that will be included in the semi-annual releases.

Entities can request features by completing the webform at www.colorado.gov/goingpacific/requests. All requests will be considered during Steering Committee meetings; the development team will reach out to the requestor if any additional information is needed.

Please [contact us](#) if you are interested in participating in Steering Committee meetings as an EGE representative.
